Re: IB Docket No. 11-109

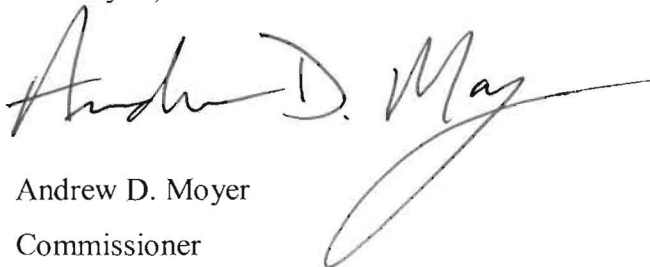

Dear Ms. Dortch:

I am contacting you regarding the approval of the company LightSquared and their new, innovative wireless network. LightSquared hopes to broaden access for all Americans by building a nationwide wireless broadband network that will provide reliable coverage from coast to coast. This network could potentially play a huge role in a potential technological revolution. This unique wholesale business model allows a host of new companies to offer wireless services at a significant discount from current retail prices.

LightSquared will enable affordability, choice, and innovation. The only thing slowing down LightSquared's approval from the FCC is the potential interference with some GPS devices. LightSquared has taken unprecedented steps to correct these issues. However, the facts clearly show that this is not LightSquared's fault at all. The GPS devices are squatting on LightSquared's spectrum causing the interference themselves. I find it to be very admirable that LightSquared is addressing this even though they did not create the interference issue. The GPS manufacturers need to get out of the way of this new network that will bring broadband to all Americans.

LightSquared is looking to improve wireless technology and American lives. I ask that you provide the necessary support to them as they attempt to bring much needed upgrades to our wireless infrastructure.

Thank you,

  
Andrew D. Moyer  
Commissioner
